*1992 ed.*

AS 3134 (Int)—1991  
(Expires 16 September 1993)

AS 3134—1992 Approval and test specification—a.c. supplied electronic ballasts for tubular fluorescent lamps  
(In Professional Package 28) 15pp EE  
Specifies essential safety and associated testing requirements which must be met before electronic ballasts may be offered for sale. It is intended to be read in conjunction with AS 3100 and is based on IEC 928.  
Committee LG/3; Supersedes AS 3134(Int)—1991; Publication date 1992-10-12; ISBN 0 7262 7790 8.

[Title allocated by Defence Cataloguing Authority: BALLAST,  
LAMP—APPROVAL AND TEST SPECIFICATION NSC 6250]

STANDARDS AUSTRALIA

This Australian Standard was prepared by Committee LG/3, Auxiliaries for Discharge Lamps. It was approved on behalf of the Council of Standards Australia on 28 June 1991 and published on 16 September 1991.

---

The following interests are represented on Committee LG/3:

- Association of Consulting Engineers Australia
  - Australian Electrical and Electronic Manufacturers Association
  - Confederation of Australian Industry
  - Electrical regulatory authorities
  - Electricity Supply Association of Australia
  - Illuminating Engineering Societies of Australia
  - Ministry of Housing and Construction, Vic.
  - Public Works Department, N.S.W.
  - Railways of Australia Committee
- 

*Review of Australian Standards.* To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up-to-date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

---

*This Standard was issued in draft form for comment as DR 89177.*

## PREFACE

This Interim Standard was prepared by the Standards Australia Committee on Auxiliaries for Discharge Lamps following requests from industry and regulatory authorities. It is intended to establish safety requirements for a.c. supplied electronic ballasts for tubular fluorescent lamps.

This Interim Standard is technically equivalent to IEC 928, *A.C. supplied electronic ballasts for tubular fluorescent lamps—General and safety requirements*; however some of the requirements have been modified to take account of local conditions.

The harmonic requirements detailed in this Interim Standard are based on IEC document 77A(Secretariat)60, which is the latest draft for the revision of IEC Publication 555-2—*Disturbances in supply systems caused by household appliances and similar equipment, Part 2: Harmonics*.

Standards Australia invites comment on this Interim Standard from persons and organizations concerned with this subject. The date of expiry for comment is two years after publication, at which time this Interim Australian Standard will be endorsed as a normal Australian Standard, revised in the light of comment received, or withdrawn.

During the life of this Interim Standard, the Committee will monitor both local and international developments and provide input during the revision of IEC 555-2, as well as monitoring all comment received.

Attention is drawn to the fact that this document is an Interim Australian Standard and should be regarded as a developmental Standard and liable to future alteration.

### © Copyright — STANDARDS AUSTRALIA

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

## STANDARDS AUSTRALIA

### Interim Australian Standard Approval and test specification— a.c. supplied electronic ballasts for tubular fluorescent lamps

This Specification shall be read in conjunction with AS 3100 (see also Clause 4 below).

**1 SCOPE** This Specification prescribes safety requirements for electronic ballasts designed for use on a.c. supplies up to 1000 V at 50 Hz, associated with tubular fluorescent lamps having rated wattages, dimensions and characteristics as specified in either AS 1201, IEC 901, or by the ballast manufacturer and operated with or without a starter switch.

This specification does not apply to the following:

- (a) Ballasts of the reactive type, requirements for which are specified in AS 3168.
- (b) Ballasts designed for use with cold-cathode fluorescent lamps, requirements for which are specified in AS 3143.
- (c) Ballasts of the integral type which form a non-replaceable part of a lamp and which cannot be tested separately.
- (d) Capacitors which are incorporated in starters.
- (e) Ballasts of the resistive type.

NOTE: It is emphasized that only safety matters and closely allied conditions are specified herein. Attention is drawn to AS 3963 which contains requirements intended to ensure the satisfactory performance of electronic ballasts in fluorescent lamp circuits.

**2 REFERENCED DOCUMENTS** The following documents are referred to in this Specification:

#### STANDARDS

- AS
- 1044 Electromagnetic interference—Household electrical appliances, portable tools and similar electric equipment—Limits and methods of measurement (IEC/CISPR 14)
  - 1201 Tubular fluorescent lamps for general lighting service
  - 1931 High voltage testing techniques
  - 1931.1 Part 1: General definitions, test requirements, test procedures and measuring devices
  - 2420 Fire test methods for solid insulating materials and non-metallic enclosures used in electrical equipment
  - 3963 a.c. supplied electronic ballasts for tubular fluorescent lamps—Performance requirements
  - 2644 Capacitors for use in discharge lamp circuits

#### APPROVAL AND TEST SPECIFICATIONS

- AS
- 3100 General requirements for electrical equipment
  - 3143 Approval and test specifications for transformers for cold-cathode electric discharge lamps and lighting systems
  - 3145 Approval and test specifications for radio interference suppression devices
  - 3168 Fluorescent lamp ballasts
  - 3191 Approval and test specifications for electric flexible cords
- IEC
- 249 Base materials for printed circuits
  - 249-2 Part 2: Specifications
  - 901 Single-capped fluorescent lamps—Safety and performance requirements

**3 DEFINITIONS** For the purpose of this Specification, the definitions below apply.

**3.1 Ballast**—unit connected between the supply and one or more fluorescent lamps, which serves mainly to control the lamp current to the required value. The unit may consist of one or more separate components.

It may also include means for transforming from the supply voltage and arrangements which help to provide starting voltage and preheating current, prevent cold starting, reduce stroboscopic effects, correct the power factor, or suppress radio interference.
