Australian Standard®

Clothing for protection against hazardous chemicals

Part 1: Protection against general or specific chemicals

This Australian Standard was prepared by Committee SF/4, Protective Clothing. It was approved on behalf of the Council of Standards Australia on 22 December 1989 and published on 7 May 1990.

The following interests are represented on Committee SF/4:

Australian Assembly of Fire Authorities

Australian Wool Corporation

Bureau of Steel Manufacturers of Australia

Confederation of Australian Industry

Confederation of Australian Motor Sport

Country Fire Authority

Department of Defence

Department of Employment, Vocational Education, Training and Industrial

Relations, Old

Department of Labour, Victoria

Department of Occupational Health, Safety and Welfare, W.A.

National Occupational Health and Safety Commission (Worksafe Australia)

Safety Institute of Australia

Wool Textile Manufacturers of Australia

WorkCover Authority, N.S.W.

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

This Standard was issued in draft form for comment as DR 86042.

Australian Standard®

Clothing for protection against hazardous chemicals

Part 1: Protection against general or specific chemicals

First published as AS 3765.1—1990.

PREFACE

This Standard was prepared by the Standards Australia Committee on Protective Clothing, at the request of the Safety Standards Board. It sets out performance requirements for materials and construction of suits designed to afford protection to the wearer against general chemicals or specific chemicals. Such suits are generally worn by personnel involved in the handling and transport of chemicals either where sustained protection is required in the event of a spillage because of the impracticality of immediate removal of clothing, or where the chemical(s) are of a highly toxic or volatile nature requiring the exclusion from the wearer of the ambient atmosphere.

This Standard is one of a series of Standards covering requirements for material, construction, performance, and use of chemical protective clothing.

When complete, the series will consist of the following Standards.

AS

3765 Clothing for protection against hazardous chemicals 3765.1 Part 1: Protection against general or specific chemicals 3765.2 Part 2: Limited protection against specific chemical splash 3765.3 Part 3: Selection, care and use

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

FOREWORD

In the application, transportation, disposal, or spillage of chemicals, persons, through error or accident, may be exposed to substances which are harmful on contact with their bodies.

The use of chemical protective clothing is but one component of the overall program for maintaining the health and safety of employees. It complements (and is not a substitute for) good planning, work practices, engineering and administrative controls, and personal hygiene. It is therefore a key element in minimizing the potential for worker exposure to harmful chemicals.

STANDARDS AUSTRALIA

Australian Standard

Clothing for protection against hazardous chemicals

Part 1: Protection against general or specific chemicals

SECTION 1 SCOPE AND GENERAL

1.1 SCOPE. This Standard specifies requirements for gastight suits, ventilated suits, and splash suits for protection against contact with hazardous chemicals in the form of solid particles, liquids, mists, gases, or vapours, in the industrial environment.

1.2 CLASSIFICATION.

- **1.2.1 General.** Protective clothing for use as a barrier to hazardous chemicals shall be classified according to the chemicals it is effective against and the extent to which the ambient atmosphere is sealed from that within the space enclosed by the clothing.
- **1.2.2 Primary classification.** Chemical protective clothing shall be classified as general purpose type or specific purpose type as follows:
- (a) General purpose type. General purpose suits.
- (b) Specific purpose type. Specific purpose suits.

General purpose suits shall provide protection for the specified minimum time against the chemicals listed in Table 2.1.

Specific purpose suits shall provide protection for the specified minimum time against the chemical or chemicals for which the material of the suit has been designed.

- **1.2.3 Secondary classification.** Both general purpose and specific purpose types may be classified according to the extent to which the external atmosphere is excluded, as follows:
- (a) Class 1. Gastight suits (full body encapsulating suits). These are worn with appropriate respiratory protection which may be of the self-contained or air line type.
- (b) Class 2. Ventilated suits (one piece coverall). These are supplied with air from a compressed air hose which provides both breathing air and positive pressure. An emergency escape type self-contained breathing apparatus may be incorporated.
- (c) Class 3. Splash suits. These are without positive pressure. They comprise one or more components, e.g. hood, blouse and trousers, boots and gloves. The suit may be used with a positive pressure hood supplied with an air line, with a self-contained breathing apparatus, or with an air purifying respirator. Alternatively, the suit may incorporate only a full face visor where respiratory protection is not required.

1.3 REFERENCED DOCUMENTS. The following documents are referred to in this Standard:

AS	
1020	The control of undesirable static electricity
1192	Electroplated coatings—Nickel and chromium
1269	Hearing conservation
