

Australian Standard[®]

**Guide to AS 1199—Sampling
procedures and tables for
inspection by attributes**

This Australian Standard was prepared by Committee QR/4, Statistical Quality Procedures. It was approved on behalf of the Council of Standards Australia on 15 November 1989 and published on 14 May 1990.

The following interests are represented on Committee QR/4:

Australian Organization for Quality
Bureau of Steel Manufacturers of Australia
Confederation of Australian Industry
Department of Defence
CSIRO, Division of Mathematics and Statistics
Federal Chamber of Automotive Industries
Federation of Automotive Products Manufacturers
Institute of Quality Assurance
National Association of Testing Authorities Australia
Telecom Australia
University of Wollongong

Review of Australian Standards. *To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.*

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

PREFACE

This Standard was prepared by Standard Australia's Committee on Statistical Quality Procedures, to supersede AS 1399—1973, as part of the organization's policy of revising older Standards.

In this edition the opportunity has been taken to cover the amendments made to AS 1199 in 1988, and to revise the format to facilitate information retrieval.

A major revision is the substitution of the words 'nonconformity' and 'nonconforming items' for the words 'defect' and 'defectives' in line with ISO policy of using 'nonconformity' to denote departure from specification, as opposed to 'defect' denoting the inability to satisfy normal usage requirements. In this Standard, the term defect is retained only to denote a nonconformity of a critical or hazardous nature.

In this Standard reference numbers in *square brackets* refer to the relevant numbers in AS 1199, whereas numbers in *round brackets* refer to relevant numbers in this Standard, i.e. numbers of Sections, Clauses, Pages, Tables and Figures.

© Copyright — STANDARDS AUSTRALIA

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

STANDARDS AUSTRALIA

Australian Standard**Guide to AS 1199—Sampling procedures and tables for inspection by attributes**

SECTION 1. SCOPE AND GENERAL

1.1 SCOPE. This Standard gives information on methods of acceptance sampling inspection with particular reference to the sampling procedures and tables for inspection by attributes, given in AS 1199. It explains the terms used, describes the various schemes and plans, gives practical advice on sampling inspection and discusses some of the theoretical aspects. This Standard applies only to sampling for inspection by attributes, that is, where the process being sampled yields items, results, or data which are classified as 'pass/fail; go/no go; conforming/nonconforming'; etc. The techniques and procedures of sampling for inspection by variables are not the concern of this Standard nor of AS 1199, these are dealt with in AS 2490, and related ISO, BS and US Standards. Clause (2.3) discusses the difference between these two types of inspection.

1.2 REFERENCED DOCUMENTS. The following documents are referred to in this Standard:

AS

1057 Quality assurance and quality control—Glossary of terms

1199 Sampling procedures and tables for inspection by attributes

2490 Sampling procedures and charts for inspection by variables for percent defective

ISO

2859 Sampling procedures and tables for inspection by attributes

US MIL STD

1235A Single and multilevel continuous sampling procedures and tables for inspection by attributes

1.3 DEFINITIONS. For the purpose of this Standard, the definitions in AS 1199 and AS 1057 apply.
