Australian Standard®

**Underground mining—Winding suspension equipment** 

Part 3: Rope cappings

This Australian Standard was prepared by Committee ME/18, Mining Equipment. It was approved on behalf of the Council of Standards Australia on 8 August 1997 and published on 5 December 1997.

The following interests are represented on Committee ME/18:

Australasian Institute of Mining and Metallurgy

Australian Chamber of Commerce and Industry

Australian Coal Association

Bureau of Steel Manufacturers of Australia

Chamber of Minerals and Energy of Western Australia

Department of Mineral Resources, N.S.W.

Department of Minerals and Energy, W.A.

Department of Mines and Energy, Qld

Department of National Resources and Environment, Victoria

Institution of Engineers, Australia

Institution of Mining Engineers

Minerals Council of Australia

Queensland Coal Board

Queensland Mining Council

South Australian Chamber of Mines and Energy

Testing Interests, Australia

Workplace Standards Authority, Tas.

**Review of Australian Standards.** To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards.

Suggestions, for improvements to Australian standards, addressed to the nead office of standards. Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

## Australian Standard®

# **Underground mining—Winding suspension equipment**

Part 3: Rope cappings

Originated as AS 3637.3—1989. Second edition 1997.

#### **PREFACE**

This Standard was prepared by the Standards Australia Committee ME/18 on Mining Equipment, to supersede AS 3637.3—1989.

It incorporates the following major changes to the 1989 edition:

- (a) Requirements for inspection and examination have been added in Clause 9.
- (b) Additional requirements specific to wedge-type capels have been included in Appendices A and C.
- (c) Type A components of rope cappings in Table 1 have been reviewed.
- (d) Figures 3, 4 and 5 have been updated.
- (e) Appendix B has been updated and expanded to include all types of cappings.

Reference was made to the British Coal document 'Procedure for examining suspension gear at testing centres' in the preparation of Appendix B. Reference was also made to the 'Ropeman's Handbook' in the preparation of Appendix C.

This is one of a series of Standards for underground mine winding suspension equipment. The Standards in this series are as follows:

#### AS

- 3637 Underground mining—Winding suspension equipment
- 3637.1 Part 1: General requirements
- 3637.2 Part 2: Detaching hooks
- 3637.3 Part 3: Rope cappings
- 3637.4 Part 4: Drawbars and connecting links
- 3637.5 Part 5: Rope swivels and swivel hooks
- 3637.6 Part 6: Shackles and chains

The term 'normative' has been used in this Standard to define the application of the appendix to which it applies. A 'normative' appendix is an integral part of a Standard.

## © Copyright - STANDARDS AUSTRALIA

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

## Underground mining—Winding suspension equipment

## Part 3: Rope cappings

- **1 SCOPE** This Standard specifies requirements for the following types of rope cappings used in the suspension of conveyances and balance ropes in vertical shafts and slope haulage declines of underground mines:
- (a) Fluted wire rope socket.
- (b) Rope socket.
- (c) Thimble and rope clamps.
- (d) Thimble-type capel.
- (e) Wedge-type capel.

Guide and rubbing rope cappings are excluded.

Additional requirements for wedge-type capels are specified in Appendix A.

General requirements for all capel types are specified in AS 3637.1.

**2 REFERENCED DOCUMENTS** The following documents are referred to in this Standard:

AS

- High strength steel bolts with associated nuts and washers for structural engineering
- 2193 Methods for calibration and grading of force-measuring systems of testing machines
- 3569 Steel wire ropes
- 3637 Underground mining—Winding suspension equipment
- 3637.1 Part 1: General requirements

BS

- Specification for white metal ingots for capping steel wire ropes
- **3 DEFINITIONS** For the purpose of this Standard, the definitions below apply.
- **3.1 Balance rope**—one or more wire ropes connecting the undersides of a pair of conveyances.
- **3.2** Conveyance—a car, carriage, cage, skip, kibble or stage, in which persons, minerals or materials are wound through a shaft and any counterweight.
- **3.3** Fluted wire rope socket—a capping consisting of a socket fastened to a rope by a precast fluted white metal plug and tail. (See Figure 1.)
- **3.4 Rope capping**—a capel or similar appliance fitted to the end of a wire rope for the purpose of attaching a conveyance to the rope.
- **3.5** Rope socket—a capping consisting of a socket fastened to a rope by filling the body of the socket with white metal or resin. (See Figure 2.)
